

# Project 3 Tasks

	Task Name	Due Date	Done	Assigned To	Comments
1	Project Report	11/14/13	<input type="checkbox"/>	Jack Kohn	All documents updated for our changes to the project
2	 Class Database	11/11/13	<input type="checkbox"/>		
3	Create SQLite database	11/07/13	<input type="checkbox"/>	Ian Pierce	Create tables for our class database.
4	Insert class info for S E major	11/07/13	<input type="checkbox"/>	Ian Pierce	Compile list of required and elective courses from the S E web page and insert into our DB
5	User Logins	11/07/13	<input type="checkbox"/>	Trevor Lund	Database should store user and password keys, and logging in from website should be easy.
6	Pseudo sql functions (or real) for certain tasks		<input type="checkbox"/>	Trevor Lund	
7	Implement procedures for the 4 year plan	11/12/13	<input type="checkbox"/>		This is the hardest part of our implementation. We need to save a major with a particular user. Each major will have a list of courses required for it, along with possible electives. The user can save which courses they've taken in a similar way to the current website. They will then be presented with the courses they still need to take, as well as a list of possible electives for each Spring or Fall semester remaining.
8	 Web UI	10/15/13	<input type="checkbox"/>		
9	Show remaining semesters, not years, in rows	11/07/13	<input type="checkbox"/>	Haitham Qamhiyeh	Need to add more collapsing boxes for semesters with appropriate labels for S/F YYYY, 8 rows
10	List of completed courses		<input type="checkbox"/>	Haitham Qamhiyeh	Box in some area should list completed courses in categories like supplemental electives, technical electives, required courses, and others based on the degree audit type of thing
11	Box of links to major documentation		<input type="checkbox"/>	Haitham Qamhiyeh	Only necessary to implement for S E, but there should be dummy links to other majors as well to show the design. Each major should have a link the main ISU page that has 4 year plans and elective documents
12	Design a singular box object that contains a class		<input type="checkbox"/>		Class info will go into squares similar to their implementation. We can improve theirs.
13	Degree Progress		<input type="checkbox"/>		Should look up in the database how many credits are completed and remaining in each category
14	Implement outline for new page design from sketches		<input type="checkbox"/>		Have to add a few more of their collapsing boxes (see sketch)
